The IFRA Standards regarding use restrictions are based on safety assessments by the Panel of Experts of the RESEARCH INSTITUTE FOR FRAGRANCE MATERIALS (RIFM) and are enforced by the IFRA Scientific Committee. Evaluation of individual fragrance ingredients is made according to the safety standards contained in the relevant section of the IFRA Code of Practice.

It is the ultimate responsibility of our customer to ensure the safety of the final product (containing this fragrance) by further testing if need be.

Electronically generated document, no signature required.

### **Maximum Pragmatic Level**

Practical considerations require setting a default maximum level of the fragrance ingredients identified as dermal sensitizers for some product types. This pragmatic level is defined as that "not exceeding the usual concentration of the fragrance compound in the finished product".

These levels are indicated in the table below:

IFRA classes	Maximum Pragmatic Level (%)
IFRA Class 1	Not Necessary Acceptable Exposure Level derived from QRA
IFRA Class 2	Not Necessary Acceptable Exposure Level derived from QRA
IFRA Class 3	Not Necessary Acceptable Exposure Level derived from QRA
IFRA Class 4	Not Necessary Acceptable Exposure Level derived from QRA
IFRA Class 5	Not Necessary Acceptable Exposure Level derived from QRA
IFRA Class 6	Not Necessary Acceptable Exposure Level derived from QRA
IFRA Class 7	Not Necessary Acceptable Exposure Level derived from QRA
IFRA Class 8	2% The maximum concentration will not exceed 2% and may be lower if determined by the QRA.
IFRA Class 9	5% The maximum concentration will not exceed 5% and may be lower if determined by the QRA.
IFRA Class 10	2.5% The maximum concentration will not exceed 2.5% and may be lower if determined by the QRA.
IFRA Class 11	Due to the expected negligible skin exposure from such products the risk of induction of dermal sensitization through the normal formulation and use of such products is considered to be negligible. As such, the concentration of fragrance ingredient is not restricted in the finished product.

If the Acceptable Exposure Level (AEL) derived from the Quantitative Risk Assessment (QRA) for a fragrance ingredient in a specific product type is less than the concentration identified as the "Maximum Pragmatic Level", the AEL will take precedence and be applied.
