

Certificate of Analysis

Indigo Powder and Cubes: Blue, Oxidized, Cosmetic Grade

Pure Indian Indigo INCI Indigofera Tinctoria (Indigo) powder or lump
Date CoA Prepared: March 2018

Production Method: Artisanal production following traditional practices in Morocco: The harvested indigo leaves are washed, then milled on a stone mill, turned into balls and slowly air dried. Once dried, the balls are crushed into a powder and lightly fermented under camel and goat urine. The indigo paste is dried and then powdered again in the stone mill. This production method means this 'cosmetic grade blue indigo' is safe for use in skin products, hair bluing and laundry bluing.

Ingredients/Identity Information

CAS Number 84775-63-3

Physical/Chemical Characteristics

Appearance and Odor: Blue powder or lump form

Colour: Indigo blue

Odour: Almost Odourless

Solubility: Insoluble in water.

Manufacture date

March 2018

ExpiryDate

March 2020
